# Financial Data Analysis

This notebook analyzes the financial data of Apple, Microsoft, and Tesla for the last three fiscal years.

#### Steps performed:

- Loaded the data from CSV files.
- Cleaned the Revenue and Net Income columns by removing symbols and converting to numeric.
- Calculated Revenue Growth (%) and Net Income Growth (%) year over year.

Below are the results and observations.

```
import pandas as pd
df apple =
pd.read csv('C:/Users/himan/OneDrive/Desktop/Apple Financials.csv')
df microsoft =
pd.read csv('C:/Users/himan/OneDrive/Desktop/Microsoft Financials.csv'
df tesla =
pd.read csv('C:/Users/himan/OneDrive/Desktop/Tesla Financials.csv')

financial chatbot()
Hello! I am your financial chatbot. Ask me about Apple, Microsoft, or
Tesla financials.
Type 'exit' to end the chat.
You: apple revenue
Chatbot: Apple's revenue was ₹3,24,559 million.
You: tesla net income
```

Chatbot: Tesla's net income was ₹20,500 million.

## Chatbot Documentation

## Overview:

This is a rule-based financial chatbot developed in Python. It responds to predefined queries about the revenue and net income of Apple, Microsoft, and Tesla using data analyzed in Task 1.

## **Supported Queries:**

- "apple revenue"
- "apple net income"
- "microsoft revenue"
- "microsoft net income"
- "tesla revenue"
- "tesla net income"

### **How it Works:**

The chatbot uses if-elif statements to check user input and prints the corresponding response. The chatbot loop continues until the user types "exit".

### **Limitations:**

- Only supports exact predefined queries.
- Cannot answer questions outside these options.
- No natural language understanding.

#### Usage

Run the financial\_chatbot() function and type a query from the list above. Type exit to end the chat.
